

# IoT electronic development boards

## Arduino

Prof. Fouad HANNA, PhD.  
fouad.hanna@heig-vd.ch

*IoT - Internet of Things*

## Table of contents

- ❑ Introduction
- ❑ Programming Arduino
- ❑ Some electronics

# Introduction

# What is Arduino

- ❑ Open-source electronics platform
- ❑ Easy-to-use hardware and software
- ❑ Microcontroller + input and output pins
- ❑ Very handy for prototyping
- ❑ Large community + lots of projects and examples and accessories

## Why Arduino

- ❑ Inexpensive.
- ❑ Cross-platform - The Arduino Software (IDE) runs on Windows, Macintosh OSX, and Linux operating systems.
- ❑ Simple, clear programming environment - The Arduino Software (IDE) is easy-to-use for beginners, yet flexible enough for advanced users to take advantage of as well.
- ❑ Open source and extensible software - The Arduino software is published as open source tools, available for extension by experienced programmers. The language can be expanded through C++ libraries.

# What can I connect to Arduino

## Sensors

- Push buttons, touchpads, tilt switches
- Variable resistors (Sliders, Volume knobs)
- Photoresistors (sensing light)
- Thermistors (temperature)
- Ultrasound (proximity range finder)
- ...

## Actuators

- Lights, LED's
- Motors
- Speakers
- Displays (LCD's)
- ...

# Arduino types

## Arduino types

Arduino Board	Processor	Memory	Digital I/O	Analogue I/O
Arduino Uno	16Mhz ATmega328	flash 32 KB SRAM 2 KB EEPROM 1 KB	14	6 input, 0 output
Arduino Due	84MHz AT91SAM3X8E	flash 512 KB SRAM 96 KB	54	12 input, 2 output
Arduino Mega	16MHz ATmega2560	flash 256 KB SRAM 8 KB EEPROM 4 KB	54	16 input, 0 output
Arduino Leonardo	16MHz ATmega32u4	flash 32 KB SRAM 2.5 KB EEPROM 1 KB	20	12 input, 0 output

## Memory types

☐ Volatile / Non volatile

☐ Flash

☐ SRAM

☐ EEPROM

Take 5 minutes to search the type and the usage of each, and if there are some limitations !

## Memory types

### ☐ Flash

Stores the program, non volatile, limited write cycles.

### ☐ SRAM

Stores program data, volatile, no write/read limitations.

### ☐ EEPROM

Stores data from your program, non volatile, limited write cycles. Slower than SRAM

## Arduino types for IoT – MKR family

	MKR 1200	MKR 1300/1310	MKR 1400	MKR 1500	MKR 1010	MKR ETH Shield
Connectivity	Sigfox	LoRaWAN	GSM	LTE-M	Wifi	Ethernet

# Arduino UNO Rev3

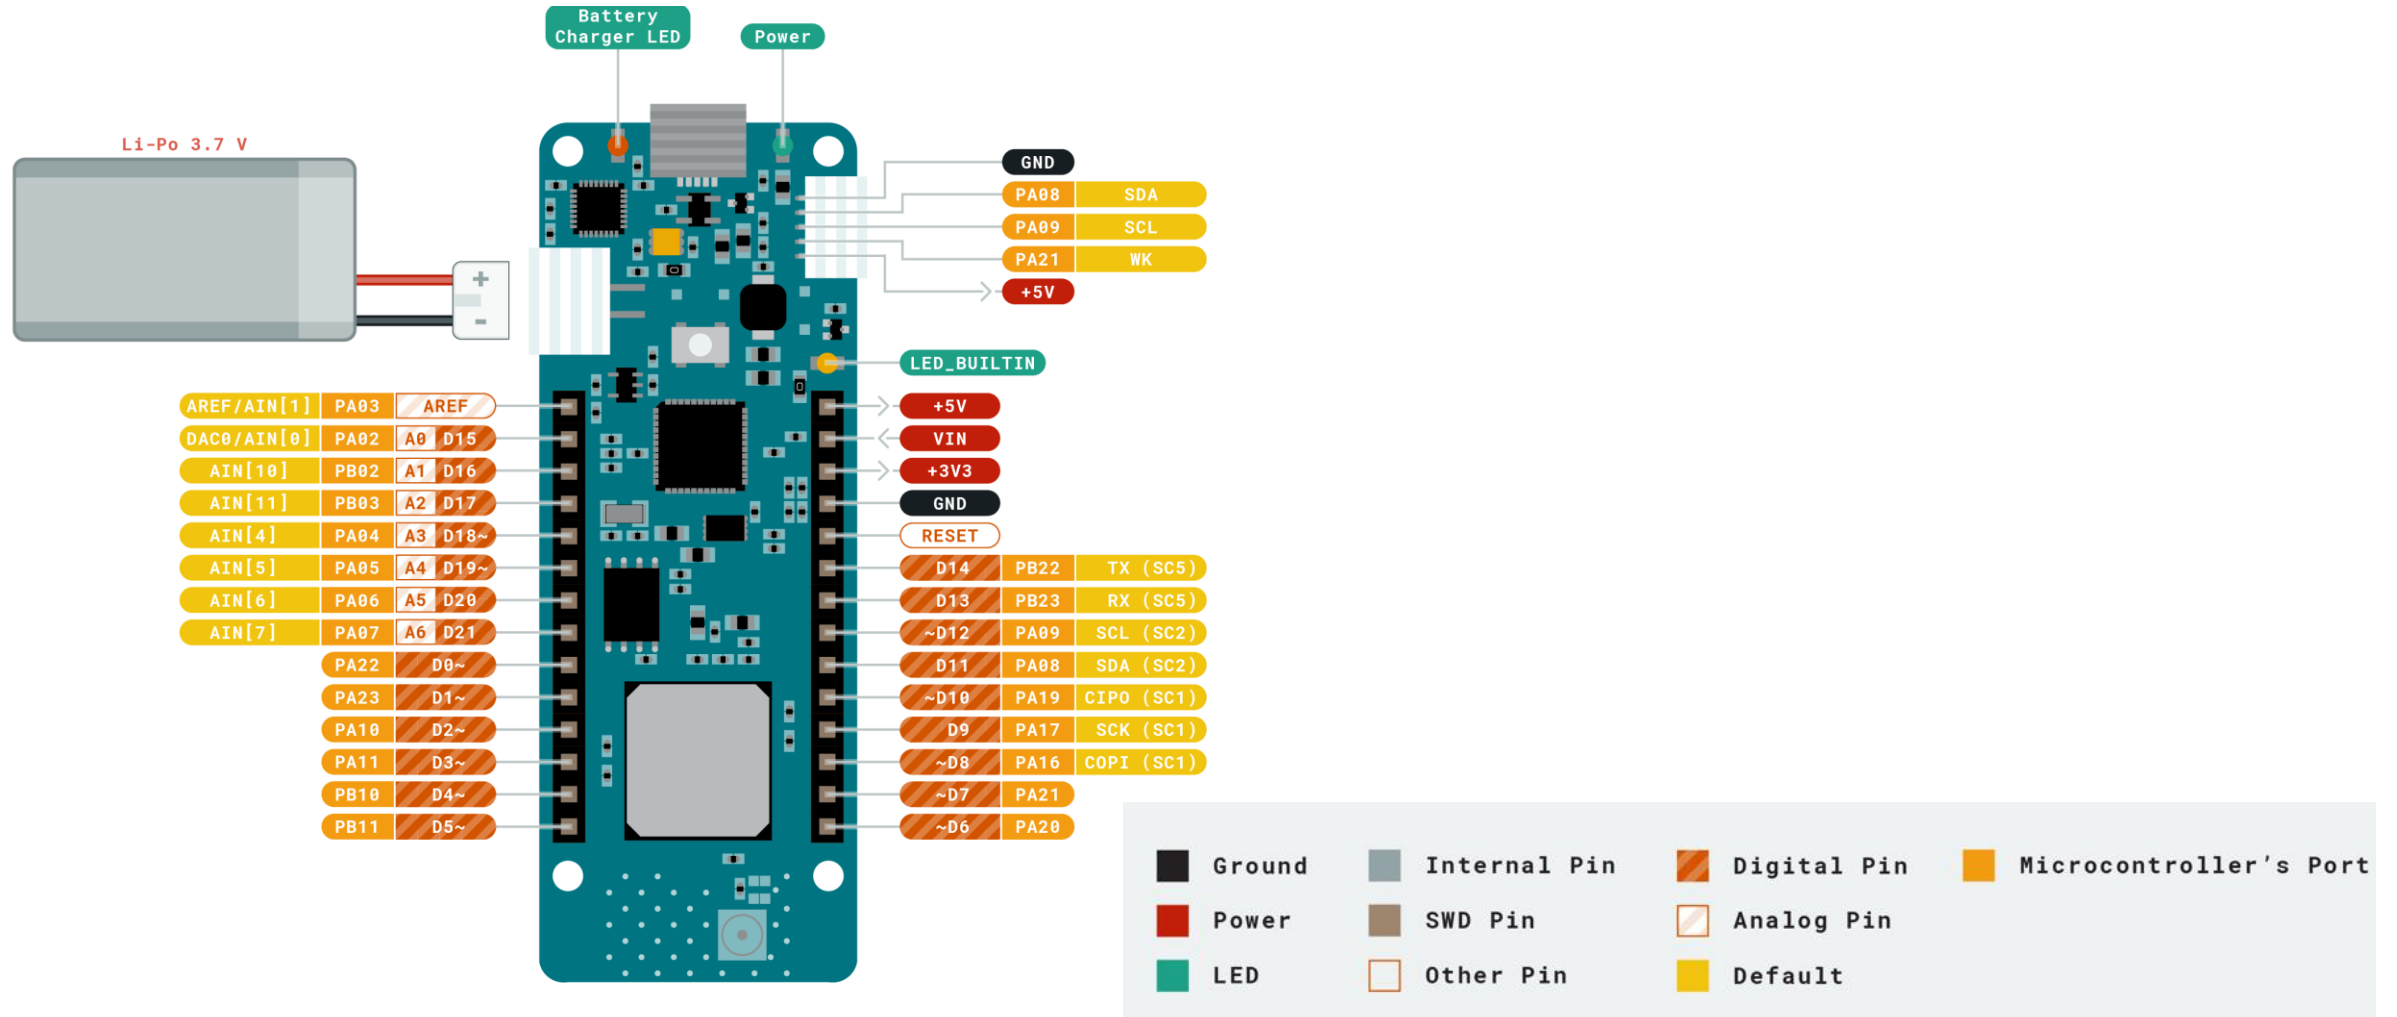

<b>Legend:</b>	<span style="color: orange;">■</span> Digital	<span style="color: blue;">■</span> I2C
<span style="color: red;">■</span> Power	<span style="color: yellow;">■</span> Analog	<span style="color: lightblue;">■</span> SPI
<span style="color: black;">■</span> Ground	<span style="color: green;">■</span> Main Part	<span style="color: teal;">■</span> Analog

ARDUINO

ARDUINO UNO REV3  
SKU code: A000066  
Pinout  
Last update: 6 Oct, 2022

# Arduino MKR 1310 (Lora)

## Arduino SPI Protocol pin names

Master/Slave (OLD)	Controller/Peripheral (NEW)
Master In Slave Out (MISO)	Controller In, Peripheral Out (CIPO)
Master Out Slave In (MOSI)	Controller Out Peripheral In (COPI)
Slave Select pin (SS)	Chip Select Pin (CS)

# Programming Arduino

# Arduino IDE 2.x.x (2021)

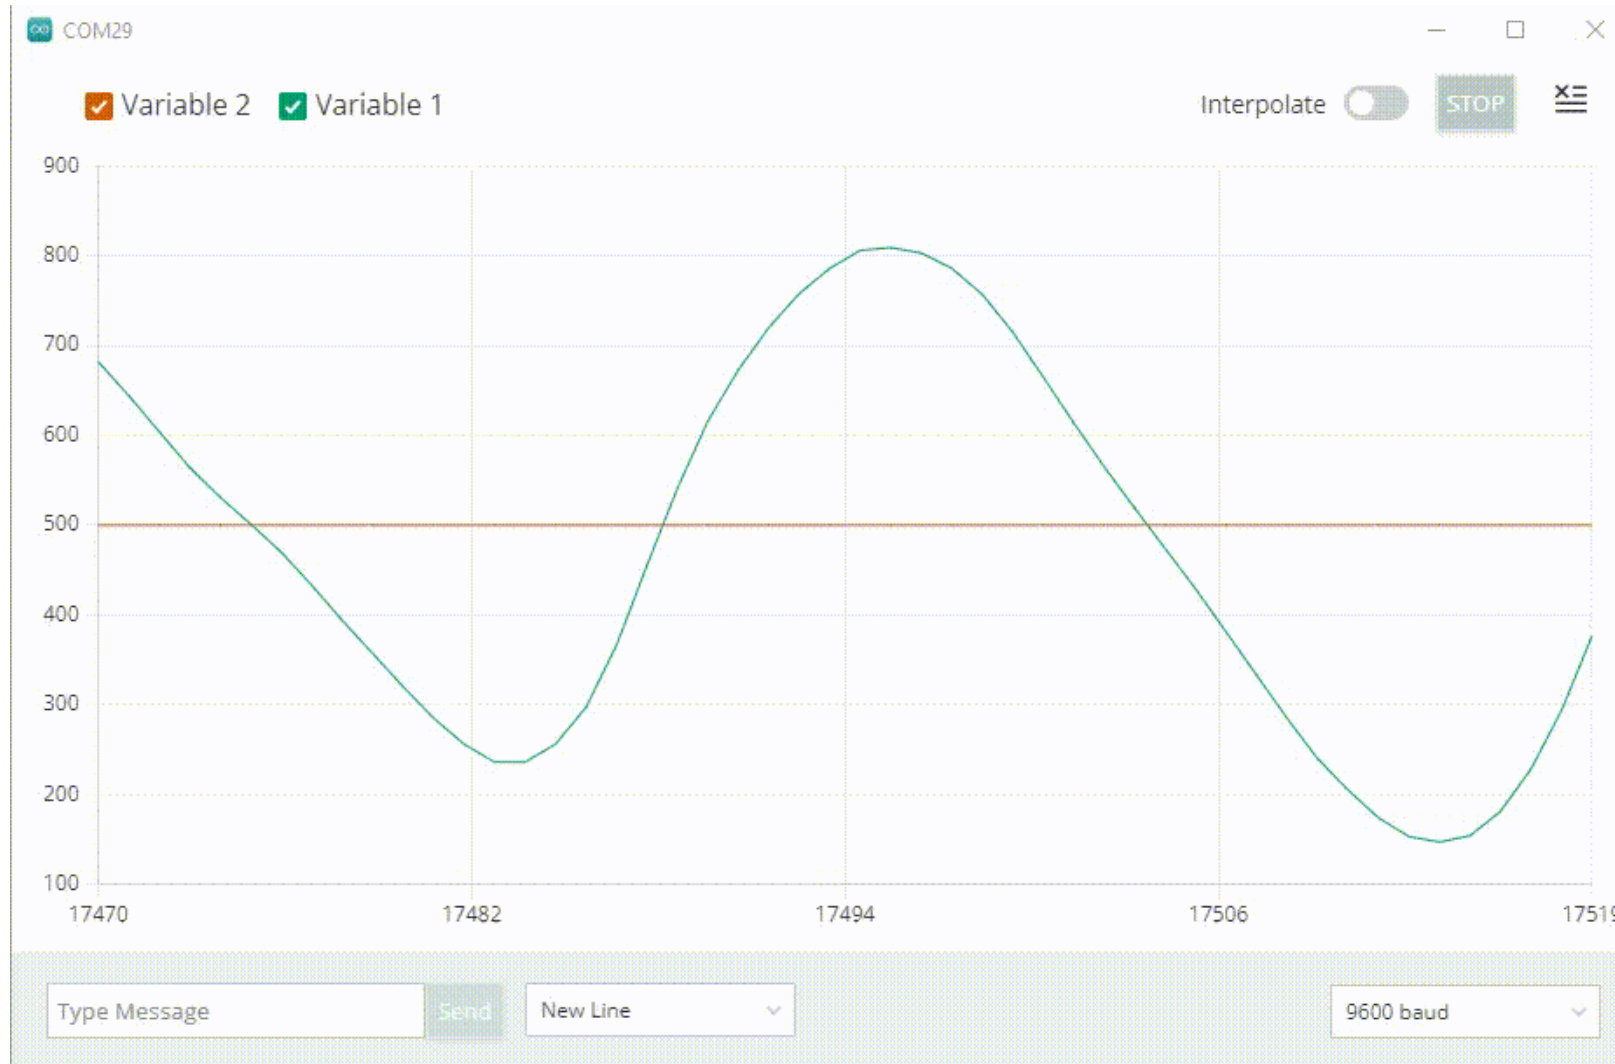

## Arduino IDE 2.x.x (2021)

- ❑ **Verify / Upload** - compile and upload your code to your Arduino Board.
- ❑ **Select Board & Port** - detected Arduino boards automatically show up here, along with the port number.
- ❑ **Sketchbook** - here you will find all of your sketches locally stored on your computer.
- ❑ **Boards Manager** - browse through Arduino & third party packages that can be installed. For example, using a MKR WiFi 1010 board requires the Arduino SAMD Boards package installed.
- ❑ **Library Manager** - browse through thousands of Arduino libraries, made by Arduino & its community.
- ❑ **Debugger** - test and debug programs in real time.
- ❑ **Search** - search for keywords in your code.
- ❑ **Open Serial Monitor** - opens the Serial Monitor tool, as a new tab in the console.

# Arduino IDE 2.x.x (2021)

## Serial Plotter

## Arduino language

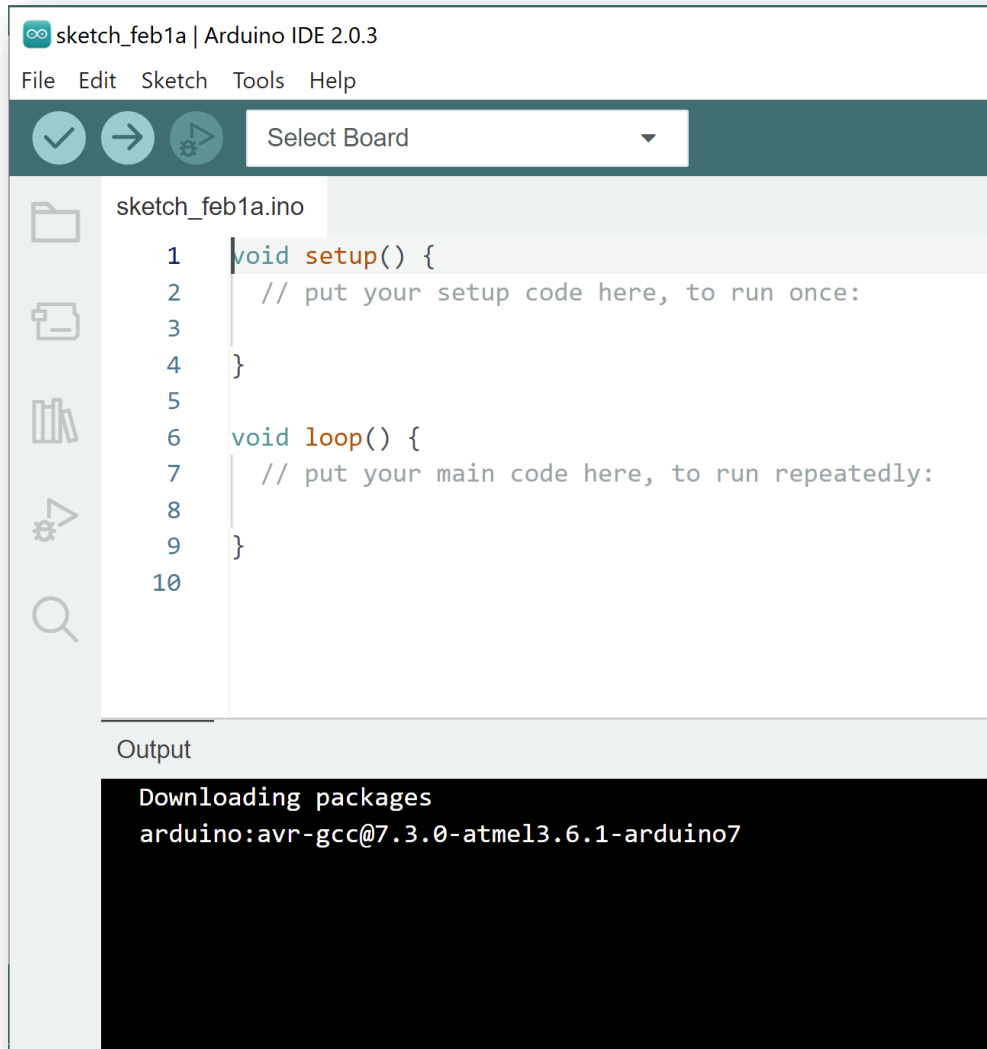

- ❑ Simplified C/C++
- ❑ Based on the wiring project

<http://wiring.org.co>

- ❑ Peripheral libraries

LCD, sensors, I2C, etc.

# Arduino sketch

```
sketch_feb1a | Arduino IDE 2.0.3
File Edit Sketch Tools Help

sketch_feb1a.ino
1 void setup() {
2   // put your setup code here, to run once:
3
4 }
5
6 void loop() {
7   // put your main code here, to run repeatedly:
8
9 }
10

Output
Downloading packages
arduino:avr-gcc@7.3.0-atmel3.6.1-arduino7
```

Declare variables at the top

Initialize  
setup() - run once at the  
beginning  
set pins

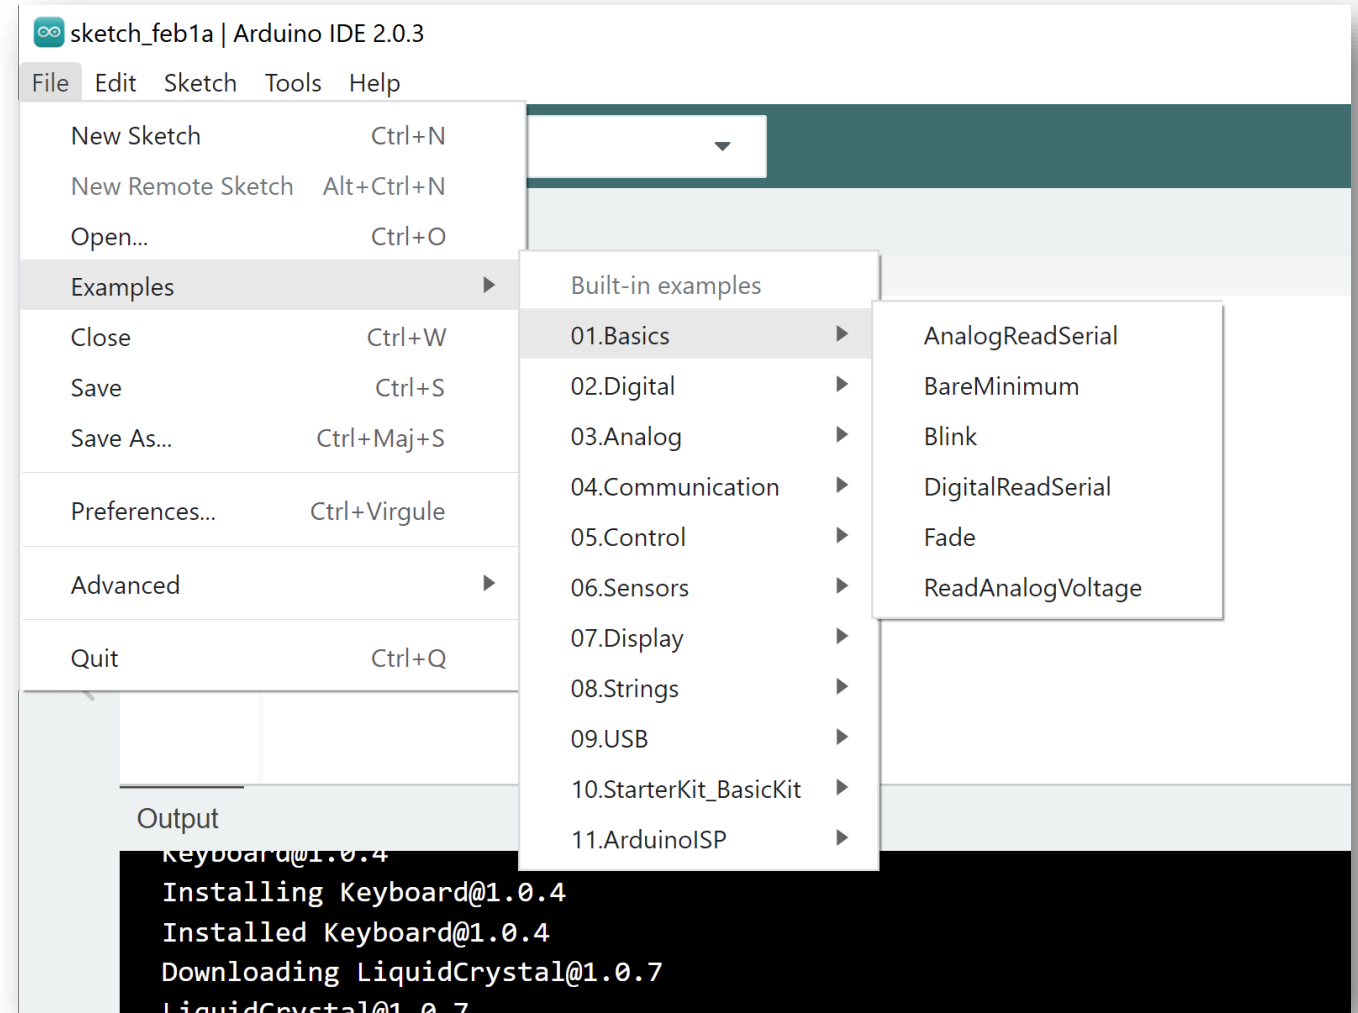

loop() - run repeatedly  
after setup()

## Arduino sketch

- ❑ A lot of examples accessible from the IDE

# Blink led example

```
Blink | Arduino IDE 2.0.3
File Edit Sketch Tools Help

Select Board

Blink.ino
16 by Arduino-Guadalupe
17 modified 8 Sep 2016
18 by Colby Newman
19
20 This example code is in the public domain.
21
22 https://www.arduino.cc/en/Tutorial/BuiltInExamples/Blink
23 */
24
25 // the setup function runs once when you press reset or power the board
26 void setup() {
27   // initialize digital pin LED_BUILTIN as an output.
28   pinMode(LED_BUILTIN, OUTPUT);
29 }
30
31 // the loop function runs over and over again forever
32 void loop() {
33   digitalWrite(LED_BUILTIN, HIGH); // turn the LED on (HIGH is the voltage level)
34   delay(1000); // wait for a second
35   digitalWrite(LED_BUILTIN, LOW); // turn the LED off by making the voltage LOW
36   delay(1000); // wait for a second
37 }
38
```

Ln 1, Col 1

And then download the sketch to the arduino

PC

USB cable Type A-B

Arduino

## Some useful fonctions

pinMode()	set pin as input or output
digitalWrite()	set a digital pin high/low
digitalRead()	read a digital pin's state
analogRead()	read an analog pin
analogWrite()	write an “analog” PWM value
delay()	wait an amount of time
millis()	get the current time

## Analog Read – convert to volt

```
void setup() {  
    Serial.begin(9600);  
}  
  
void loop() {  
    // read the input on analog pin 0:  
  
    int sensorValue = analogRead(A0);  
  
    // Convert the analog reading (which goes from 0 - 1023) to a voltage (0 - 5V):  
  
    float voltage = sensorValue * (3.3 / 1023.0);  
  
    Serial.println(voltage);  
}
```

### MKR family boards

- Operating voltage 3.3v
- Default resolution 10 bits → 1024

```
int ledPin = 13;

void setup() {
    pinMode(ledPin, OUTPUT);
}

void loop() {

    digitalWrite(ledPin, HIGH);

    delay(1000);

    digitalWrite(ledPin, LOW);

    delay(1000);

}
```

```
unsigned long previousMillis = 0;

const long interval = 1000;

...

void loop() {

    unsigned long currentMillis = millis();

    if (currentMillis - previousMillis >= interval) {

        previousMillis = currentMillis;

        if (digitalRead(ledPin) == LOW) {

            digitalWrite(ledPin, HIGH);

        } else {

            digitalWrite(ledPin, LOW);

        }

    }

}
```

## Arduino online simulator

- ❑ If you don't have the materials you can use an online simulator.
- ❑ Tinkercad is a free, online 3D modeling program that runs in a web browser, known for its simplicity and ease of use. Since it became available in 2011 it has become a popular platform for creating models for 3D printing as well as an entry-level introduction to constructive solid geometry in schools.

AUTODESK<sup>®</sup>  
TINKERCAD<sup>®</sup>

# Some electronics

# Electrical Circuit

## Electrical Circuit with a Switch

## Short Circuit

- ☐ We must never connect positive and negative side to a power source without having an electrical component in between.
- ☐ If you do, it is called a short circuit.
- ☐ For example, if you short circuit a battery, the battery will get very hot and the battery will run out very quickly.

$$U = R * I$$

$U$  – Voltage [V]

$R$  – Resistance [ $\Omega$ ]

$I$  – Current [A]

## Multimeter

- ❑ You can use a Multimeter to measure current, voltage, resistance, etc. in an electric circuit.

## Resistance color code reading

- ❑ Online calculators exist, try them !
- ❑ Otherwise, use a multimeter to measure the value.

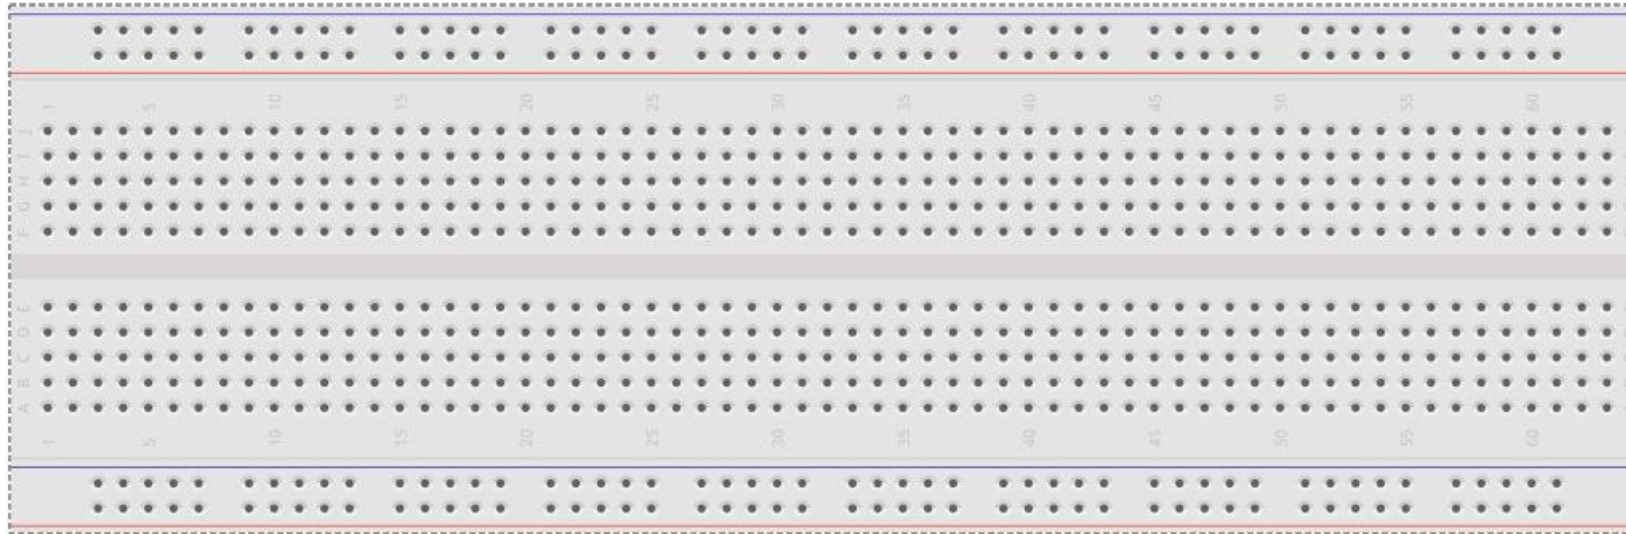

Color	Significant figures			Multiply	Tolerance (%)	Temp. Coeff. (ppm/K)	Fail Rate (%)
black	0	0	0	x 1		250 (U)	
brown	1	1	1	x 10	1 (F)	100 (S)	1
red	2	2	2	x 100	2 (G)	50 (R)	0.1
orange	3	3	3	x 1K		15 (P)	0.01
yellow	4	4	4	x 10K		25 (Q)	0.001
green	5	5	5	x 100K	0.5 (D)	20 (Z)	
blue	6	6	6	x 1M	0.25 (C)	10 (Z)	
violet	7	7	7	x 10M	0.1 (B)	5 (M)	
grey	8	8	8	x 100M	0.05 (A)	1(K)	
white	9	9	9	x 1G			
gold			3th digit only for 5 and 6 bands	x 0.1	5 (J)		
silver				x 0.01	10 (K)		
none					20 (M)
